

ALLEN & HEATH

CTI-1500 FREQUENTLY ASKED QUESTIONS

Q: How does it differ from a C1500?

A: The metalwork has been completely re-engineered to save weight (a whopping 6.5kg). Weight reduction also required removing the soft side trims and armrest.

Q: Does it run the same firmware as C1500?

A: Yes, the new CTi-1500 runs the same firmware which powers the rest of the dLive family.

Q: Is it compatible with the rest of the dLive range?

A: Yes, the CTi runs the same firmware, same familiar software and GUI, and file format. It can control any dLive MixRack (DM or CDM), and load any dLive Show file.

Q: Can it be rackmounted?

A: No, the CTi-1500 doesn't have mounting points for rack ears. It typically travels in custom made flight cases for the best protection on the road. For rack-mounting applications e.g. fixed install, the C1500 should be used.

Q: Where can I buy a flightcase to achieve <23kg total weight?

A: We are not supplying flight cases for the CTi-1500. However we can recommend three manufacturers in the UK who have designed cases for the CTi-1500 to keep the total weight under 23kg – and that is counting in our heaviest I/O card and even the dust cover!
